No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1992 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

Contents of Volume 98

Number 1, July 1992

Acknowledgment

1 **Top Reviewers in 1991–1992**
Joseph A. Burns

Regular Articles

2 **A Critical Reanalysis of Planetary Accretion Models**
R. A. Kolvoord and R. Greenberg

20 **Evolution of Random Velocities of Planetesimals in the Course of Accretion**
Keiji Ohtsuki

28 ***N*-Body Simulation of Gravitational Interaction between Planetesimals and a Protoplanet. II. Dynamical Friction**
Shigeru Ida and Junichiro Makino

38 ***B, V* Photometry of Thebe (JXIV)**
D. Pascu, S. P. Panossian, R. E. Schmidt, P. K. Seidelmann, and J. L. Hershey

43 **Reflection Spectra of Shocked Ordinary Chondrites and Their Relationship to Asteroids**
Klaus Keil, Jeffrey F. Bell, and D. T. Britt

54 **Water Vaporization on Ceres**
Michael F. A'Hearn and Paul D. Feldman

61 **Earth and Mars: Water Inventories as Clues to Accretional Histories**
Michael H. Carr and Heinrich Wänke

72 **Water—Cumulus in Jupiter's Atmosphere: Numerical Experiments with an Axisymmetric Cloud Model**
Yoav Yair, Zev Levin, and Shalva Tzivion

82 **The Tropospheric Abundances of NH_3 and PH_3 in Jupiter's Great Red Spot, from *Voyager IRIS* Observations**
Caitlin A. Griffith, Bruno Bézard, Tobias Owen, and Daniel Gautier

94 **A Seasonal Radiative–Dynamic Model of Saturn's Troposphere**
C. D. Barnet, R. F. Beebe, and B. J. Conrath

108 **A Volatility Index for Comets**
Fred L. Whipple

115 **Comets: Groundbased Observations of Spacecraft Mission Candidates**
David J. Osip, David G. Schleicher, and Robert L. Millis

125 **The Origin of Complex Organic Ions in the Coma of Comet Halley**
D. L. Mitchell, R. P. Lin, C. W. Carlson, A. Korth, H. Rème, and D. A. Mendis

134 **Discovery of a Second Narrow Absorption Feature in the Near-Infrared Spectrum of Io**
D. F. Lester, L. M. Trafton, T. F. Ramseyer, and N. I. Gaffney

141 **Effects of Electromagnetic and Plasma Drag Forces on the Orbit Evolution of Dust in Planetary Magnetospheres**
O. Havnes, G. E. Morfill, and F. Melandsø

Number 2, August 1992

151 **The McDonald Observatory Faint Comet Survey: Gas Production in 17 Comets**
Anita L. Cochran, Edwin S. Barker, Tod F. Ramseyer, and Alex D. Storrs

163 Spectrophotometry of the Continuum in 18 Comets
A. D. Storrs, A. L. Cochran, and E. S. Barker

179 Multiple Scattering of Light in a Spherical Cometary Atmosphere with an Axisymmetric Dust Jet
Kenneth M. Chick and Tamas I. Gombosi

195 Impacts of Dust Particles $m > 10^{-9}$ g in Halley's Coma as Seen in the Electric Field Waveforms of Vega 2
P. Oberc and W. Parzydło

207 The -SiH Vibrational Stretch as an Indicator of the Oxidation State of Silicon in a Cometary or Asteroidal Regolith
Joseph A. Nuth III, Marla H. Moore, Toshihiko Tanabé, and George Kraus

211 Asteroid Proper Elements and Secular Resonances
Andrea Milani and Zoran Knežević

233 Survival of Microorganisms in Smectite Clays: Implications for Martian Exobiology
Deborah M. Moll and J. Robie Vestal

240 Mars Radar Scattering: Arecibo/Goldstone Results at 12.6- and 3.5-cm Wavelengths
J. K. Harmon, M. A. Slade, and R. S. Hudson

254 Minor Constituents in the Martian Atmosphere from the ISM/Phobos Experiment
J. Rosenqvist, P. Drossart, M. Combes, T. Encrenaz, E. Lellouch, J. P. Bibring, S. Erard, Y. Langevin, and E. Chassefière

271 The Structure, Stability, and Global Distribution of Io's Atmosphere
Emmanuel Lellouch, Michael Belton, Imke de Pater, Gabriel Paubert, Samuel Gulkis, and Thérèse Encrenaz

Erratum

296 Volume 95 (1992): Robert A. Kolvoord and Joseph A. Burns, "Three-Dimensional Perturbations of Particles in a Narrow Planetary Ring," pp. 253–264

297 *Author Index for Volume 98*

NOTICE

The Subject Index for Volume 98 will appear in the December 1992 issue as part of a cumulative index for the year 1992.

ICARUS
International Journal of Solar System Studies

INFORMATION FOR AUTHORS

ICARUS is devoted to the publication of original contributions in the field of solar system studies. Manuscripts reporting the results of new research—observational, experimental, or theoretical—concerning the astronomy, geology, meteorology, physics, chemistry, biology, and other scientific aspects of our solar system or extrasolar systems are welcome. The journal generally does not publish papers devoted **exclusively** to the Sun, the Earth, celestial mechanics, meteoritics, or astrophysics. Reviews, historical papers, and manuscripts describing spacecraft instrumentation may be considered, but only with prior approval of the Editor. An entire issue of the journal is occasionally devoted to a single subject, usually arising from a conference on the same topic. ICARUS does not publish meeting announcements or general notices. The language of publication is English. In special cases, with the Editor's approval, short abstracts of papers can also appear in French, German, or Russian.

All papers are reviewed, generally by two independent referees. Authors will usually be asked to respond to criticisms and suggestions by the referees prior to publication; at the Editor's discretion, reviewers may be consulted about resubmitted manuscripts. Authors are invited to give recommendations pro or con about potential reviewers; the Editor may use these to guide the selection of referees. If authors so request in their cover letters, manuscripts will be handled anonymously during the refereeing process.

Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. For the benefit of the reviewers, three (3) copies of all crucial references cited in the manuscript as *submitted* or *in press* must accompany the paper.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal. Articles and any other material published in ICARUS represent the opinions of the authors and should not be construed to reflect the opinions of the Editor or the Publisher.

There are no page charges. However, authors will be charged for color reproduction or foldout pages; the publisher will provide an estimate of these costs on request. Fifty **reprints** of each paper will be furnished gratis to the author and additional reprints may be purchased.

Manuscripts. *Four copies* of the manuscript, including figures, tables, etc., should be submitted to:

Editorial Office, **Icarus**
Space Sciences Building
Cornell University
Ithaca, New York 14853-6801

Telephone: 607-255-4875
Fax: 607-255-6354
Telex: WUI 6713054
Electronic mail:
CUSPIF::ICARUS (on span)
icarus@astrosun.tn.cornell.edu (on internet)

Authors should retain the original typescript. At least one set of figures should be suitable for camera-ready reproduction. All manuscripts must be typewritten with wide margins and *double-spaced throughout*, including references and footnotes. Number each page of the manuscript. Include on the first page the title of the paper and the name(s) and affiliation(s) of the author(s), including mailing address(es), telephone number(s), fax number(s) [or telex number(s) if fax is not available], and electronic mail address(es). At the bottom of the first page note the number of manuscript pages, figures, and tables; also list up to five key words (topics), taken from the journal's index, that classify the subject of the paper. On the second page indicate a proposed running head of not more than 60 characters, and the name and address to which editorial correspondence and proofs should be directed. The third page should contain a brief abstract, and the text should begin on the following page. After the main text, give Appendixes, Acknowledgments, references, tables, figure captions, and figures, in that order. Places where figures and tables are to appear in the published paper should be marked in the margins of the manuscript. For the review process authors may submit manuscripts in which figures and tables appear in the manuscript proper.

Please write with attention to organization, style, and especially brevity. Present results logically, with order dictated by the needs of the reader. Take special care in composing the title and abstract, since these will be the most frequently read sections of the paper. In the title, specific words are preferable to general ones. The abstract should summarize the conclusions of the research, including quantitative results where appropriate, rather than merely stating the problem.

Whenever possible, quotients in mathematical expressions should employ the solidus (/) rather than being displayed in built-up form. However, for units, exponential notation is preferred (e.g., erg cm^{-2} sec^{-1}, not erg/cm^2 sec).

Tables and Figures. When described in the body of the text, a table should be referred to as Table X, an equation as Eq., and a

figure as Fig. Y (use the abbreviation everywhere except at the beginning of a sentence).

Tables are to be numbered consecutively with Roman numerals in order of their citation in the text. Each table should be typed, *double-spaced,* on a separate sheet with due regard to the proportions of the printed page. All tables should bear appropriate headings. Unusually elaborate tables should be prepared to allow them to be reproduced in the journal directly without typesetting.

Figures. At the time of submission of the manuscript, one original of each figure is to be submitted in such form as to permit photographic reproduction without redrawing: Line glossies should be carefully drafted, no larger than 22 × 30 cm. Original drawings, laser prints, or standard glossy photographic reproductions are acceptable. *Authors should design figures so that they will fit one or two columns of print. Care should be taken to assure that computer-drawn figures use the journal's space efficiently.* Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper, if used, should be ruled in blue. *Each figure should be identified with the author's name and figure number.* All figures, whether line drawings or halftones, should be numbered consecutively in Arabic numerals, in order of their citation in the text. Figure captions should be typewritten on a separate sheet, following the text. Color plates and foldouts are published at the author's expense.

Literature Citations. *Careful compliance with the instructions for the preparation of the list of references is required;* manuscripts with incomplete references (or missing abstracts) may be returned to the author for correction before being considered for publication.

Literature citations in the text should be in one of the following forms: Sridhar and Tremaine 1992 (for two authors); Farinella *et al.* 1990 (for three or more authors); Allison 1990, p. 198 (for reference to a specific page). To distinguish two or more works by the same author(s) in the same year, use suffixes a, b, etc., following the year (e.g., Cruikshank *et al.* 1991a, 1991b).

Literature citations in the bibliography should be *listed alphabetically* according to the surname of the (first) author. Journal references should contain the *names and initials of all authors, the year, the title of the article, and standard abbreviation of the journal, the volume number, and the first and last page numbers.* Titles of journals and books should be in italics, volume numbers in boldface. (In a typed manuscript, indicate italics by single underlining and boldface by wavy underlining.) Below are shown examples of the proper reference forms for a book, a journal article, and a book chapter, respectively.

LINDZEN, R. S. 1990. *Dynamics in Atmospheric Physics,* Cambridge U. Press, Cambridge.

SPENCER, J. R. 1990. A rough-surface thermophysical model for airless planets. *Icarus* **83,** 27–38.

VEVERKA, J., R. H. BROWN, AND J. F. BELL 1991. Uranus satellites: Surface properties. In *Uranus* (J. T. Bergstralh, E. D. Miner, and M. S. Matthews, Eds.), pp. 528–560. Univ. of Arizona Press, Tucson.

Guidelines for Submission of "Notes." Papers on especially topical subjects will be given unusually rapid handling if they satisfy the following limitations on length:

(i) Manuscripts should be typed double-spaced and should be no longer than nine (9) pages, including a very brief abstract of one or two sentences.

(ii) The sum of figures and tables should be less than, or equal to, two.

We expect that ICARUS will publish "Notes" within four (4) months of submission, if no revision is required. We will try to complete refereeing and editorial handling in less than one month. In order to speed publication, proofs of "Notes" will be proofread only at Academic Press.

Proofs will be sent to the corresponding author. When submitting a manuscript, the author should include a list of the symbols employed, identified typographically, not mathematically. This list will **not** be printed, but will help to avoid costly author's corrections in proof. Authors will be charged for excessive alterations in proof.

Personal Computer Disks

Manuscripts may be submitted to ICARUS on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Please supply the file as a straight ASCII file with generic codes specified by the publisher. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular and mathematical material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing the disk for typesetting conversion and a list of generic codes, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, 1250 Sixth Avenue, San Diego, California 92101; telephone: 619 699-6415; fax: 619 699-6800).
